**BANNER AMERICAN PRODUCTS LAUNCHES REDESIGNED  
MIGHTYLAM 2700HC LAMINATING/MOUNTING MACHINE**  
**New MightyLam 2700HC Laminating/Mounting Machine Is Perfect  
Machine for Quick Printers and Signshops**

(Temecula, California) ... **Banner American Products, Inc.** is proud to introduce its newly redesigned **2700HC Laminating/Mounting machine**. The **MightyLam 2700HC** laminator provides print shops and sign shops the capability of mounting, laminating and encapsulating digital and offset output up to 26" wide. Affordable and functional, the **MightyLam 2700HC** features hot and cold lamination with dual heated rollers, release liner take up, and a ¼" mounting capability. The **MightyLam 2700HC** laminating/mounting machine comes with standard 1" film supply mandrels plus 3" core adapters enabling it to utilize both 1" and 3" core thermal films as well as run 3" core pressure sensitive films. Affordable and functional, the **MightyLam 2700HC** is capable of running all types of cold and heat-set pressure sensitive laminates and adhesives and encapsulating with true thermal laminates. With its "heat assist" mode (top roller heat only) this machine delivers the perfect heat level to increase initial adhesion and clarity of slow curing pressure sensitive films, lessening the time to receive finished output suitable for display.

According to Alan Parkhill, Banner American Products, Inc., "In addition to the new **MightyLam 2700HC's** extremely competitive price, the laminator will operate on a 120 volt electrical circuit. This can save an additional \$500-\$1500 in setting up a dedicated 220 volt line."

For more information on the MightyLam 2700HC Laminating/Mounting machine and or other fine Banner American Products, Inc. visit [www.banam.com](http://www.banam.com) or call 800-572-2144.
